

PROTECT YOUR WATER SYSTEM

Semiannual Maintenance Program

We find problems before you find yourself out of water.

Our 10-point system check includes:

- ✔ Inspect all electrical wiring for corrosion, ants, burns, and loose connections.
- ✔ Ensure equipment is drawing the proper voltage and amps.
- ✔ Confirm pressure switch, transducer, relief valve, and shut-off valve are fully operational.
- ✔ Test PSI in pressure and surge tanks, and adjust air if needed.
- ✔ Cycle the submersible pump to make sure it is operating normally.
- ✔ Inspect the storage tank for leaks.
- ✔ Test the float switch in storage tanks.
- ✔ Check storage-tank plumbing components for corrosion or leaks.
- ✔ Confirm normal operation of booster or constant-pressure pumps.
- ✔ Inspect all above-ground piping for leaks and missing or insufficient insulation.

\$500*
per year

INCLUDES

Inspection every six months

Priority scheduling for service calls

Free first hour of labor on service calls
